ST. CHARLES COUNTY ADDITIONAL DATA	62
ST. CHARLES COUNTY DISTRICTS	63-66

The St. Louis Regional Profile is a 30,000-foot view of the inputs and outcomes of the traditional and charter public school districts in the St. Louis supervisory region. It is intended to provide families, policymakers, and educators with information and data about the public school districts in the region. We hope this information will help in the decision-making process around student learning.

**Why was the profile created?** Each public school and district in the state reports a variety of data to the state for accountability and financial purposes, much of which is made available for public consumption. These data are often displayed as individual pieces, somewhat downplaying the relationship between each of the different elements. While publicly available data is aggregated to the school- or district-level, they show how these different inputs at the student-level (per pupil expenditures, teacher experience, community factors, etc.) all relate to outcomes.

This profile uses these data to provide a foundation for policymakers, families, and school personnel to better understand how the districts in the region are performing compared to one another and to the state. Additionally, it helps to better understand how each of these different measures contributes to educating students in the St. Louis region. Policymakers might further use this profile to better understand the contexts in which each district is operating and to discuss how to equitably allocate resources accordingly.

**How is this year's profile different?** This year's St. Louis profile is different in the following ways:

- *Including more districts*
  - We have expanded from only St. Louis City and County to include all districts in the St. Louis supervisory region.
- *Student demographics*
  - Using data from the Department of Elementary and Secondary Education's (DESE) Food and Nutrition Services office, we have included the percentage of students who qualify for free lunch along with FRL-eligibility.
- *Teacher demographics*
  - Using data provided by DESE, we examine the racial demographics and percentage of teachers with different levels of experience.
- *Student achievement*
  - This year, we examine 3rd-grade Communication Arts performance from 2015 through 2019 due to the state's law regarding on-grade-level reading for third graders. Additionally, this gives a snapshot of how student performance has fluctuated along with the state's testing and standards changes over the past few years. We include additional academic performance data in the additional data tables.
  - We also show the ACT participation and average ACT score between 2015 and 2019, encompassing the three years where Missouri paid for ACT testing for all 11th graders.
- *Additional data*
  - This year's profile includes a table of additional data for each county that includes MAP testing results, growth scores, pre-Kindergarten enrollment, and teacher salaries.
  - We also include the unemployment rate, college enrollment rates, and the percent of the population who hold a college degree to provide some additional community context that might affect schools and students.

**PRIME CENTER**

**SAINT LOUIS UNIVERSITY**

*Better evidence, better policy, better schools*

**What is in the profile?** In the following pages, we describe the students, teachers, funding, and performance of both traditional public school (TPS) districts and public charter school districts in the St. Louis region, including districts in St. Louis City and County, as well as St. Charles and Jefferson Counties. Using publicly available data from DESE for the 2018-19 and—when available—the 2019-20 school year, we provide a surface-level look at the information that makes each district unique and likely influences the educational outcomes of students across the region.

Education in the St. Louis region is as diverse as it is complex and serves the largest population of students of any area in the state. St. Louis City is served by one district, **St. Louis Public Schools (SLPS)**, where nearly 20,000 students enroll. Students living within the City boundary are also eligible to apply to and enroll in one of the city's 16 public charter districts. Charter districts range in size from 88 students at **The Arch Community School** to 2,886 in the **Confluence Academies**.

St. Louis County has 22 TPS districts and the county's Special School District. These districts range in size from 785 students in **Brentwood** to 20,899 students in **Rockwood**.

Jefferson County is home to 11 districts, serving some of the more rural parts of the region. These range in size from 287 students in **Sunrise** to 11,184 students in **Fox**. St. Charles County has five school districts, includes some of the state's largest districts, and ranges from 1,927 students in **Orchard Farm** to 17,703 in **Ft. Zumwalt**.

St. Louis County is also home to the **Special School District (SSD)**, which exclusively serves students with disabilities. SSD not only serves roughly 2,000 full-time students but also provides special education services to students enrolled in the other school districts of St. Louis County. We provide a more in-depth description of SSD later in this publication (pg. 30-31).

To better understand what the numbers for individual districts mean, we compare each of the TPS districts to the St. Louis region average as a whole and the rest of the state of Missouri. Conversely, charter schools are compared only to SLPS and the state, as only students who would otherwise enroll at SLPS are currently eligible to enroll in a St. Louis charter school.

**How did schools in the St. Louis region respond to COVID-19?** Since the Spring of 2020, schools across the state and nation

have had to navigate the impacts of the COVID-19 pandemic. Missouri was not shielded from the pandemic's shutdown, as the state opted for fully distanced learning for the Spring of the 2019-20 school year. The state also opted to cancel MAP testing and heavily altered the data reporting and collection process. The pandemic's impacts continued into the fall of the 2020-21 school year, as no districts in the region opened the 2020-21 school year with an entirely in-person option. Instead, 61% of students began the school year in fully distanced education. By comparison, only 25% of students statewide began the 2020-21 school year in fully distanced education.

**How much do districts spend?** Districts in the region spend slightly above the state average, but the difference between districts is stark. **Festus** spends \$8,726 per student, whereas **Brentwood** spends \$19,036. This per-pupil amount ranges from \$9,604 at **Gateway Science Academies** to \$13,877 at **North Side Community School** for charter schools. Due to the unique needs of students enrolling in the Special School District, the average per-pupil expenditure is \$205,480. To provide a more comparable amount, SSD is excluded from the average spending in the region as it would inflate the number.

Unlike in previous years, districts are now reporting expenditures at the school rather than the district level. Often, high schools will spend more than elementary schools within the same district. Therefore, the average per-pupil expenditure may not be as accurate of a statistic to describe the differences in usable resources. Consequently, we also report on the median spending within the district. Median expenditures range from \$8,916 at **Hillsboro** to \$17,923 in **Brentwood**.

**Why does student mobility matter?** We also examine student mobility, with particular attention given to the percent of students who transfer. Students moving into and out of districts experience disruptions in their learning, and receiving districts are judged by how quickly they can get new students caught up. Therefore, districts with higher student mobility rates often have students who have experienced more disruptions in learning. Multiple districts in the region had mobility rates below 10%, meaning very few students moved into or out of the district during the school year. Conversely, districts like **SLPS**, **Riverview Gardens**, and **Normandy Schools Collaborative** have mobility rates exceeding 30%, meaning a third of students in these districts move in or out during the year.

Districts with higher mobility rates often have lower percentages of students who score at the ready level on the English and Math MAP assessment, lower average ACT scores, and lower high school graduation rates. The connection is most substantial between high mobility rates and low achievement rates, showing some relationship between stability and consistency in *where* students learn, helping students *to* learn.

During the pandemic, mobility rates dropped statewide and in districts that have historically had highly mobile students. The increased stability is likely in some part related to students being able to access their school from a distance and not having to enroll in new districts if they moved.

**Who are St. Louis' students?** Compared to the state, the St. Louis region serves the largest percentage of students of color. The region also has a wide range of student socioeconomic needs as measured by the percentage of students qualifying for the federal Free/Reduced-Price Lunch (FRL) program. School districts serving high percentages of FRL-eligible students may opt to participate in the Community Eligibility Provision (CEP). Districts opting to participate in the CEP are subsequently classified as 100% FRL-eligible. The St. Louis region had 16 districts participating in the CEP during the 2019-20 school year. By contrast, school districts like **Ladue Schools** and the **School District of Clayton** had 10% of its students classified as FRL-eligible. As an additional piece of context, we include the percentage of students who qualify for free lunch and represent those with the most significant socioeconomic need. These percentages range from 8% in **Ladue** to 100% at **KIPP: St. Louis**.

**Who teaches in the St. Louis Region?** Along with student race and ethnicity, we describe teachers' demographics and experience in each of the districts across the region. While many districts serve high concentrations of students of color, most districts employ a predominantly white staff. Additionally, districts with the highest concentrations of FRL-eligible students often have higher percentages of new (1 year of experience) and novice (2-5 years of experience) teachers.

**How are St. Louis' students performing on assessments?** In this year's edition of the St. Louis profile, we pay special attention to the percent of third-grade students who score proficient and advanced on the third-grade communication arts assessment. Missouri law requires all students to read on grade level by the end of third-grade, making this an essential start to students' educational ventures.

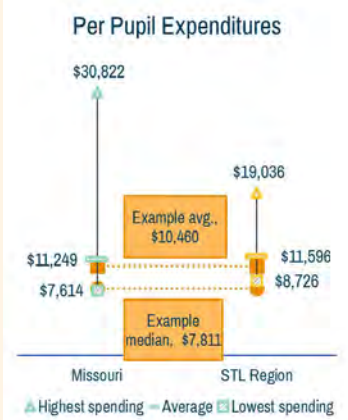

Along with the 3rd grade MAP assessment, we examine the participation rates and average composite scores on the ACT between 2015 and 2019. Our examination of ACT performance includes the years the state covered the test's cost, leading to nearly 100 percent participation statewide. Several school districts have maintained participation rates above 80 percent following the policy's end. Still, some districts saw their participation rates drop dramatically, such as **Dunklin School District**, where participation rates dropped from 96% in 2018 to 49% in 2020.

**What changes can we expect in the 2021 profile?** In response to the COVID-19 pandemic, schools across the St. Louis region and state began the 2020-21 school with different approaches to reopening. As a result, the state has asked for new data to be collected. Additionally, districts are expected to resume MAP testing in the spring of 2021. The next profile will change to include and describe these new and altered data elements.

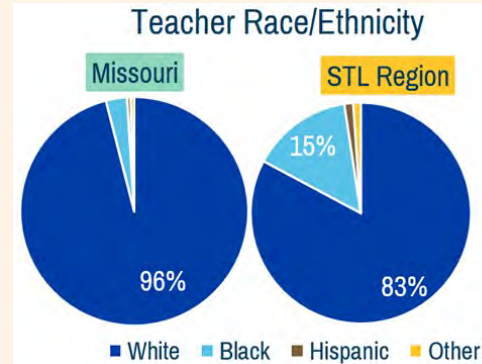

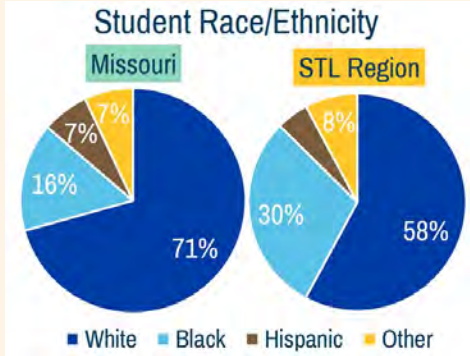

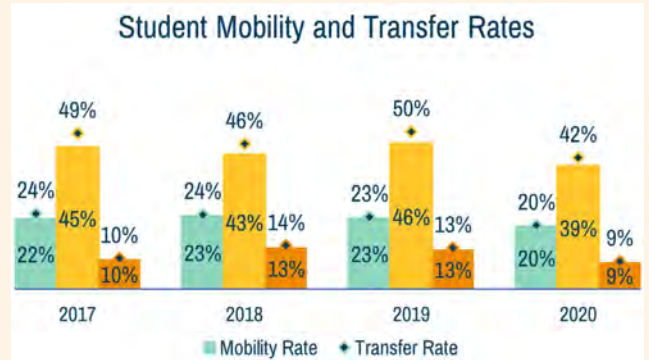

This publication has only scratched the surface of what makes the education landscape in St. Louis complex and fascinating. Here, we provide a view of only *district* characteristics using publicly available data, which tells a part of the story. As unique as each of the districts are in the St. Louis region, we would likely uncover even more remarkable patterns and information for *schools* both within and across the districts. We hope that these profiles provide some useful information about education in the St. Louis region and inform the conversation to ensure that each district can help all students realize their full potential.

# WHAT THE NUMBERS MEAN

**Per pupil expenditures** shows the range of spending within districts in the state (on the left) and within schools in the STL region (on the right). The middle boxes show the median and average school expenditure within the district of interest.

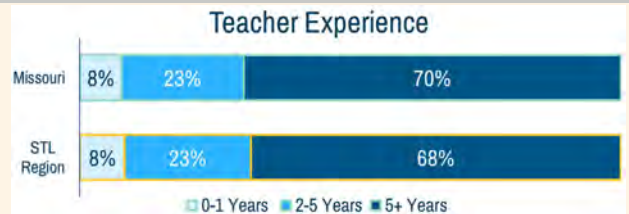

**Student mobility rates** are the number of students who move out (*transfer*) of the district divided by the sum of fall enrollment and students who move into (*additional enrollment*) the district during the school year. **Student transfers** during the year often drive high mobility rates.

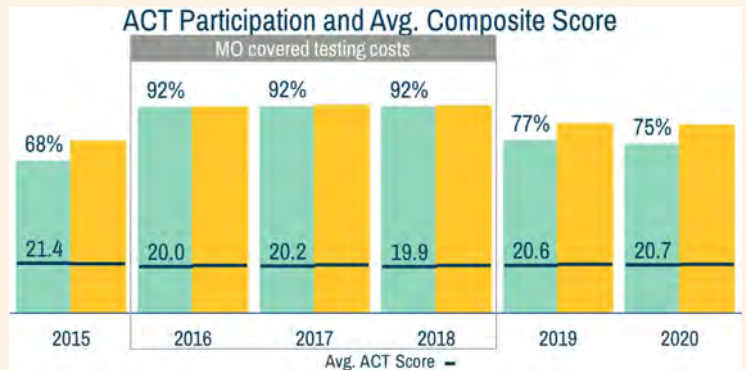

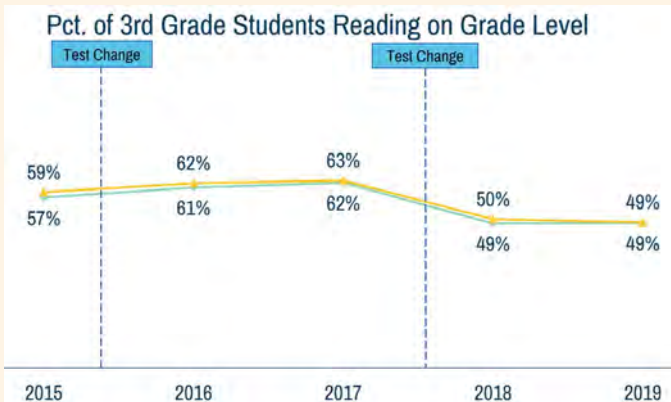

We show **student race/ethnicity** (above) and the percent of students qualifying for **free/reduced-price lunch** (below). We pay special attention to the percentage of students qualifying for **free lunch**.

We show the **race of teachers** and the percentage of **beginning** (0-1 years), **novice** (2-5 years), and **veteran** (5+ years) teachers.

**Percent of 3rd Grade Students Reading on Grade Level** shows the share of students who score proficient or advanced on the Missouri Assessment Program (MAP) test. If 3rd graders are behind grade level, the state requires schools to implement individualized learning plans.

**ACT Participation and Average Composite Score** shows the percentage of students who take the ACT as well as their average score. The state covered the test cost for all 11th graders between 2016 and 2018.

Average Spending per Student

# TRADITIONAL PUBLIC SCHOOL DISTRICTS: ST. LOUIS COUNTY

St. Louis County is served by 22 traditional public school districts and is also home to the St. Louis County Special School District. Following the COVID-19 pandemic, 18 districts opened the 2020-21 school year **fully distanced**, 3 opened with a **hybrid** model, and 1 opened with an **in-person/distanced** option.

Special School District (SSD) of St. Louis County provides educational services to children in St. Louis County who have special needs. In 1957, voters of St. Louis County supported a tax to maintain the operation of SSD. St. Louis County's delivery model for special education services is unique within Missouri. Some students are served exclusively by SSD in SSD schools, but the largest percentage of students attend and receive services within their local schools.<sup>1</sup>

With the St. Louis Regional Profile, the regional averages, as well as the individual district profiles, should be read and understood within St. Louis County's unique context.

## Funding and Expenditures

In addition to the revenue generated by the St. Louis County SSD tax, SSD receives state funding as an independent school district. In 2019, the Department of Elementary and Secondary Education (DESE) Finance Data and Statistics Summary Report shows that state funding distributed to SSD was based on an average daily attendance (ADA) of 1,619 for those students served *exclusively by SSD*.<sup>2</sup> However, state data show total expenditures for SSD at \$417,576,029, the amount spent on all students served by SSD, including those students served within their local school district. Therefore, taking the total expenditures for all students served by SSD divided by the number of students exclusively served by SSD results in a highly skewed average per pupil expenditure of \$205,480.

$$\$417,576,029.24 \div 1,618.66 = \$205,479.79$$

SSD reports their expenditures for 2017-18 as \$15,146 per pupil and serving over 23,000 students, which would be the total SSD expenditures divided by the total number of students served by SSD in that year, including those who are served within their local district.<sup>3</sup> That calculation attributes 100 percent of the cost of educating the students served in their local district to the SSD.

The complexity of delivering special education services in St. Louis County, given that some students are served exclusively by SSD and others are not, makes it challenging to provide a true per pupil expenditure for this district.

Students who meet Eligibility Requirements may be assessed using an alternative to MAP assessments (MAP-A) and as determined by their Individualized Education Plans (IEP).<sup>4</sup>

<sup>1</sup> Average daily attendance (ADA) is used in the state funding formula for determining state aid. ADA is calculated as the total hours of attendance of resident pupils divided by the number of hours school was in session during the term. (§ 160.011(2), RSMo.)

# ST. LOUIS CITY TRADITIONAL & PUBLIC CHARTER SCHOOLS

St. Louis City is served by one traditional public school district (Saint Louis Public Schools) and 16 public charter school LEAs. In response to the COVID-19 pandemic, SLPS and 11 charter school LEAs opened the 2020-21 school year **fully distanced**, four charter schools opened with a **hybrid** model, and one charter school opened with an **in-person/distanced** option.

Charter schools are independent public schools that are free from some rules and regulations that apply to traditional public school districts. In exchange for this flexibility, charter school sponsors must hold schools accountable to their contracts. Charter schools are non-sectarian, do not discriminate in their admissions, and may not charge tuition. Students residing in St. Louis City are eligible to enroll in one of the city's charter schools. At the end of the 2019-20 school year, Carondelet Leadership Academy closed, as did St. Louis College Preparatory at the end of 2018-19. During the 2019-20 school year, the Souldard School and Kairos Academies opened. We do not describe these two charter schools due to a lack of available data regarding academic achievement, mobility, and other pertinent information.

**About the PRiME Center:** Opened in the Spring of 2018, the PRiME Center is an independent education policy research center housed in the School of Education at Saint Louis University. We conduct and share research on best practices in education. We help lawmakers, educators, and families in the state of Missouri make decisions about education policy and practice. Our mission is to ensure that the people making decisions and building policies about education have the data they need to build the best and most equitable educational systems possible.
